

EduLink (Tuition Management System)

Enhanced Functionality after the Presentation

The system's existing functionality has been further enhanced to provide more comprehensive and detailed information about classes, teachers, and institutes. Additionally, the subject-wise communication feature has been improved to ensure more effective interaction among students through a dedicated community forum, which continues to operate under the supervision of the admin. These enhancements contribute to a more structured and interactive academic environment.

Added Functionalities after the Proposal Presentation

Following the proposal presentation and based on the panel feedback, some new features were incorporated into the system to enhance its functionality and user experience.

- Facilitating with seminars integrating institute classes. This feature only for particular institute classes' students.
- The system will include a built-in class scheduling Calendar feature within the website, without relying on external services such as the Google Calendar API. That feature available for all the actors in our system.
- The system will generate reports with analysis of exam results by comparing current students' performance with the previous year's class in the same institute class.
